

Burdick Water Main Replacement Project Notice of Construction – January 25, 2021

The District of Oak Bay will be replacing 235 metres of 100 mm diameter water main on Burdick Avenue between Mayhew Street and Nottingham Road. The installation of the new pipe is expected to begin early February 2021, and the work is expected to be completed in May 2021.

Over the next several weeks, the District will be in the area locating existing infrastructure. To do this, the District will conduct dye testing on perimeter drains and use hydro-excavation equipment to expose the utilities and measure depths. While Public Works are on site, residents can expect an increase in noise, dust, and the movement of construction equipment. To enable the work to proceed as efficiently as possible, we ask that you refrain from parking along this section of roadway when work is underway, and we ask that you park your vehicle(s) on your driveway.

Over the course of the project the District will be available to assist you with any specific needs. Please do not hesitate to call the District if you have any special requirements.

This work is part of our on-going infrastructure improvement plan that will improve the integrity of the water supply system for domestic use and for fire-fighting purposes.

We shall endeavour to keep any inconvenience to a minimum. Thank you in advance for your patience and understanding, and should you have any questions, please contact the District of Oak Bay's engineering department at (250) 598-3311 or by email at engineering@oakbay.ca.
